

Packages

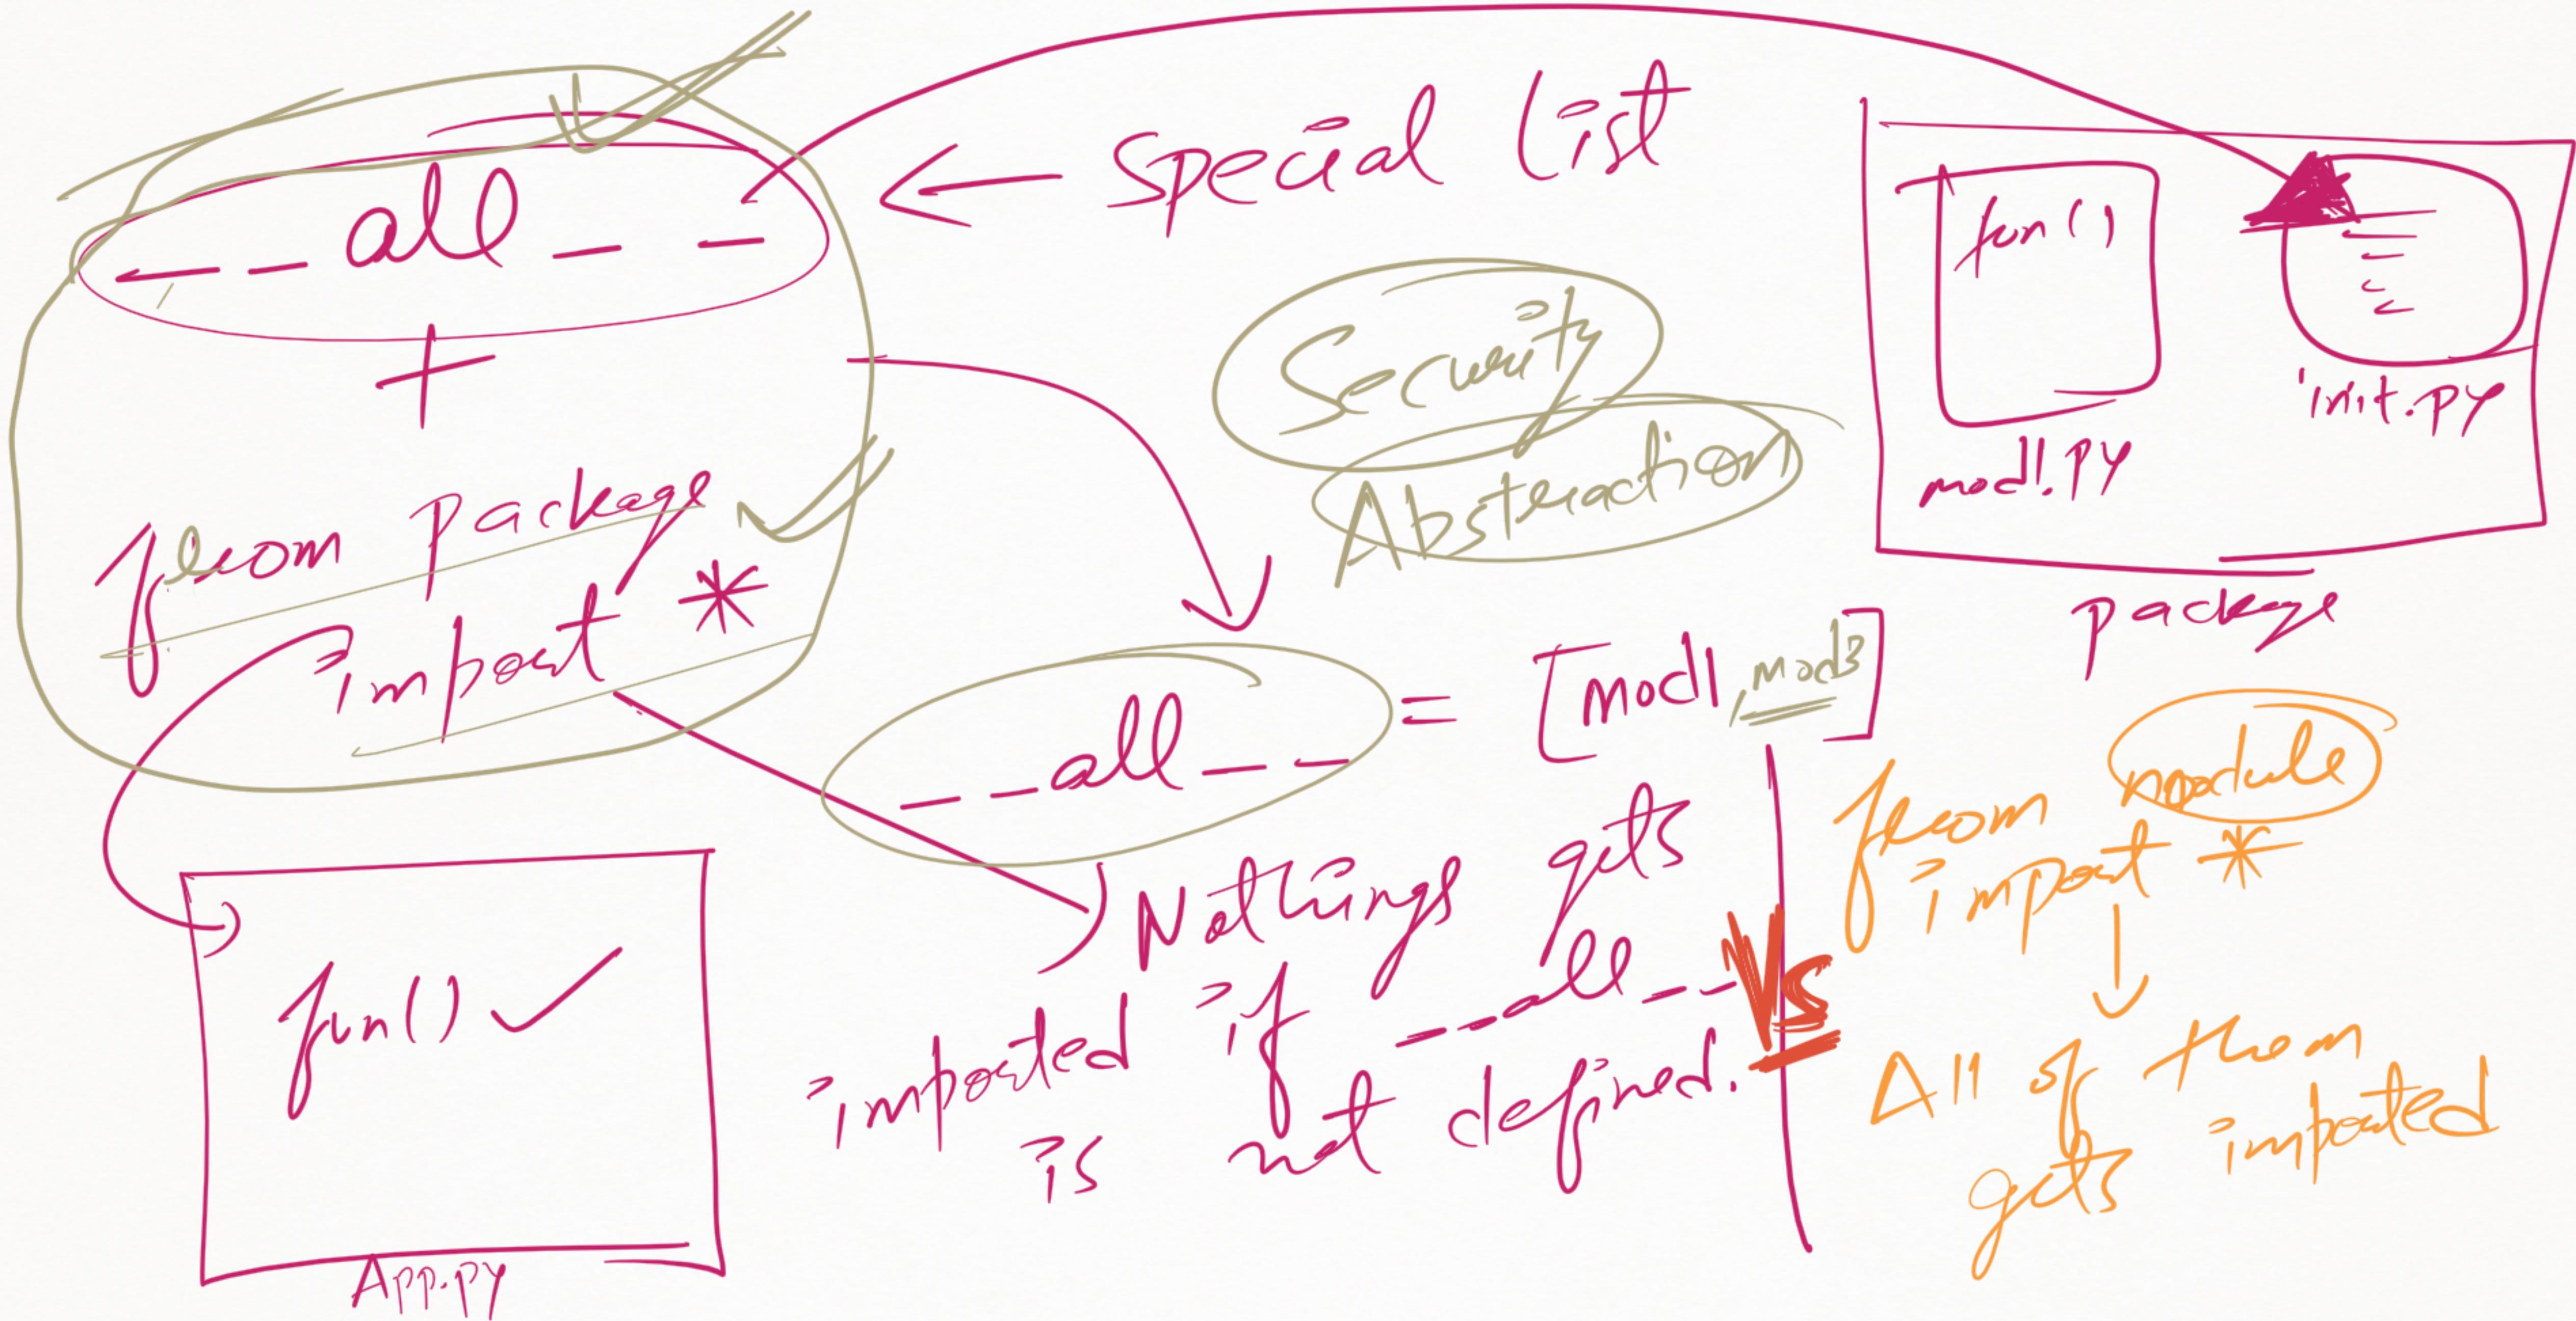

Special
File

—init_.py

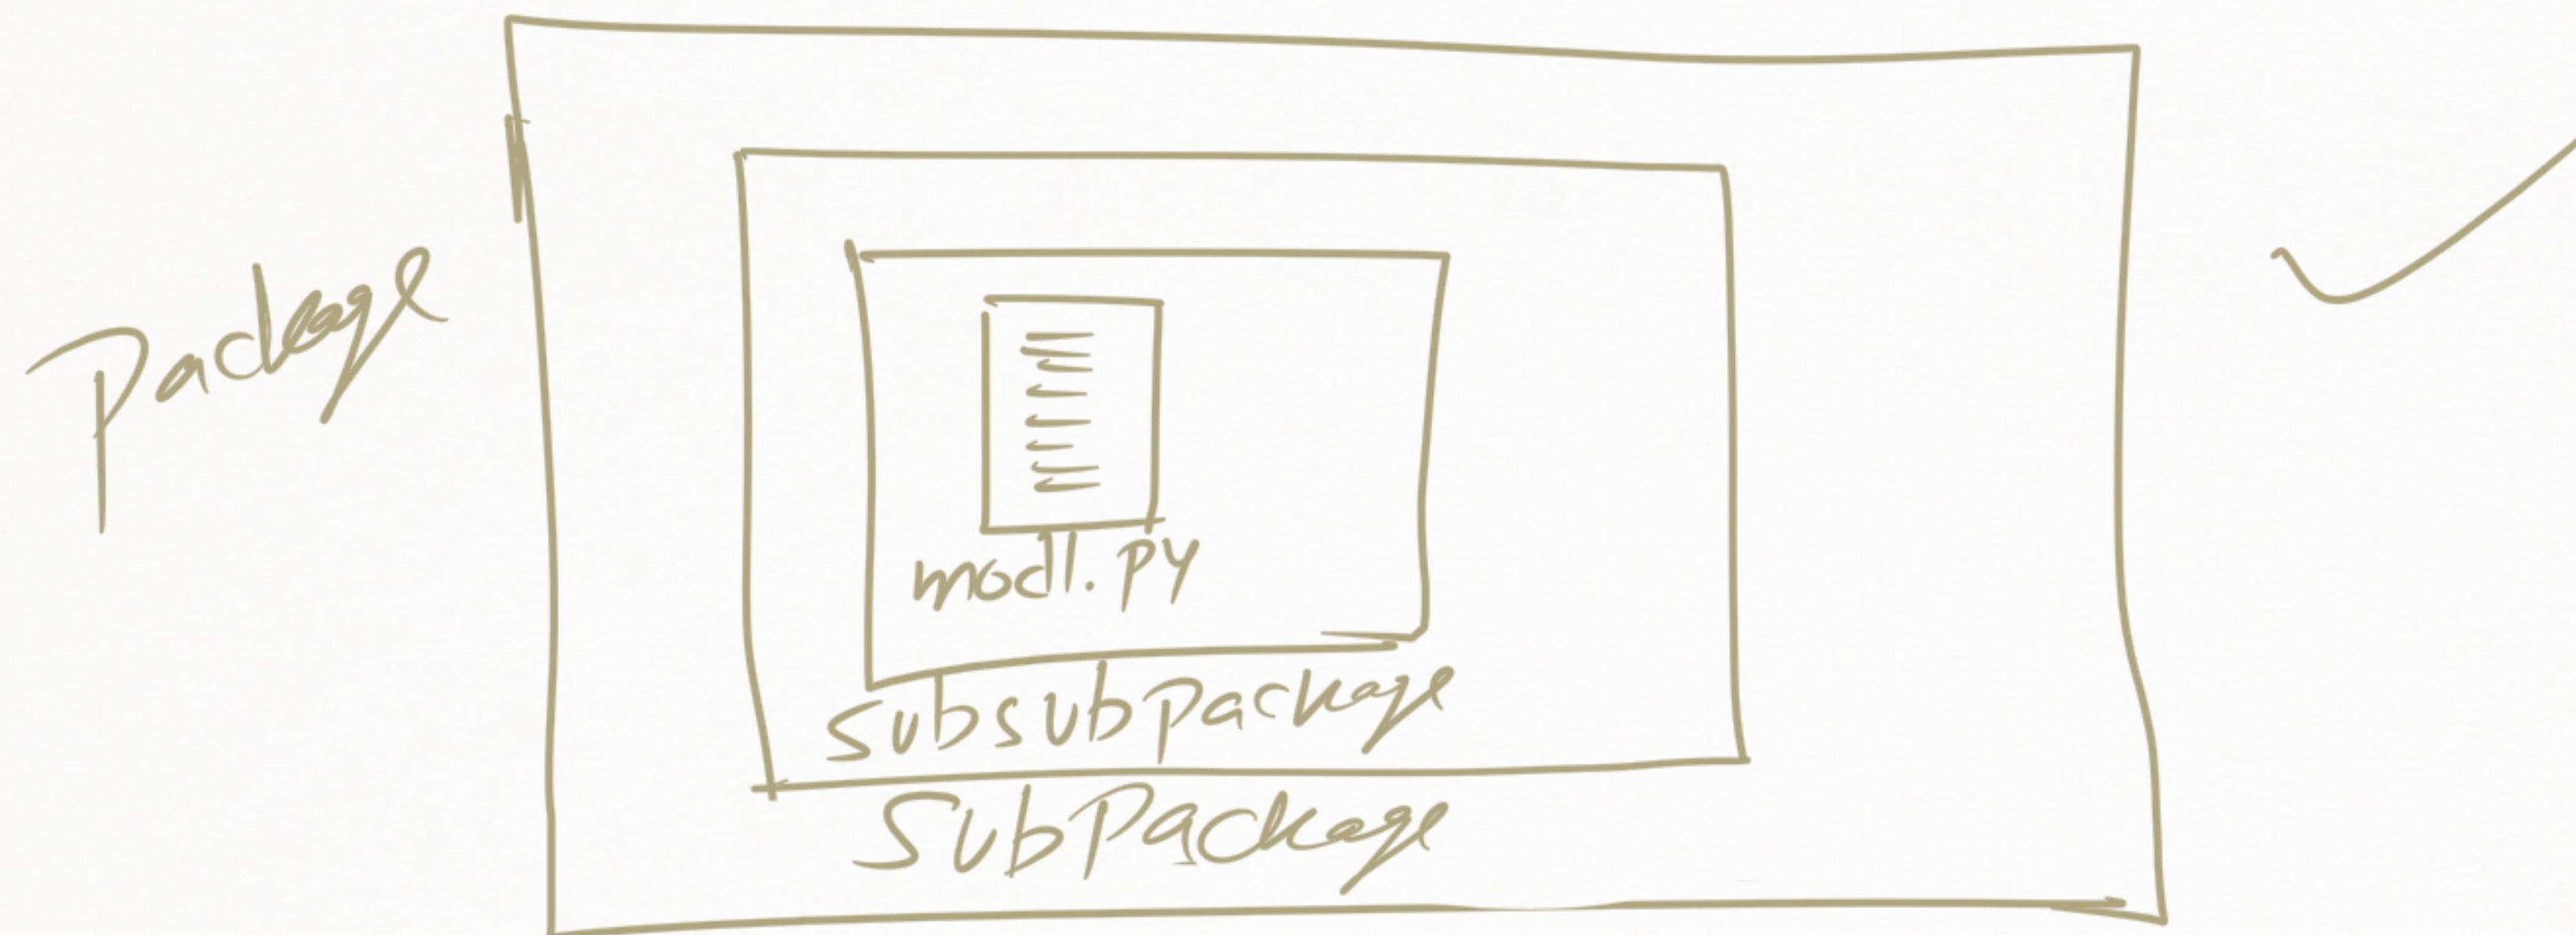

→ init file runs
first whom we
import a package

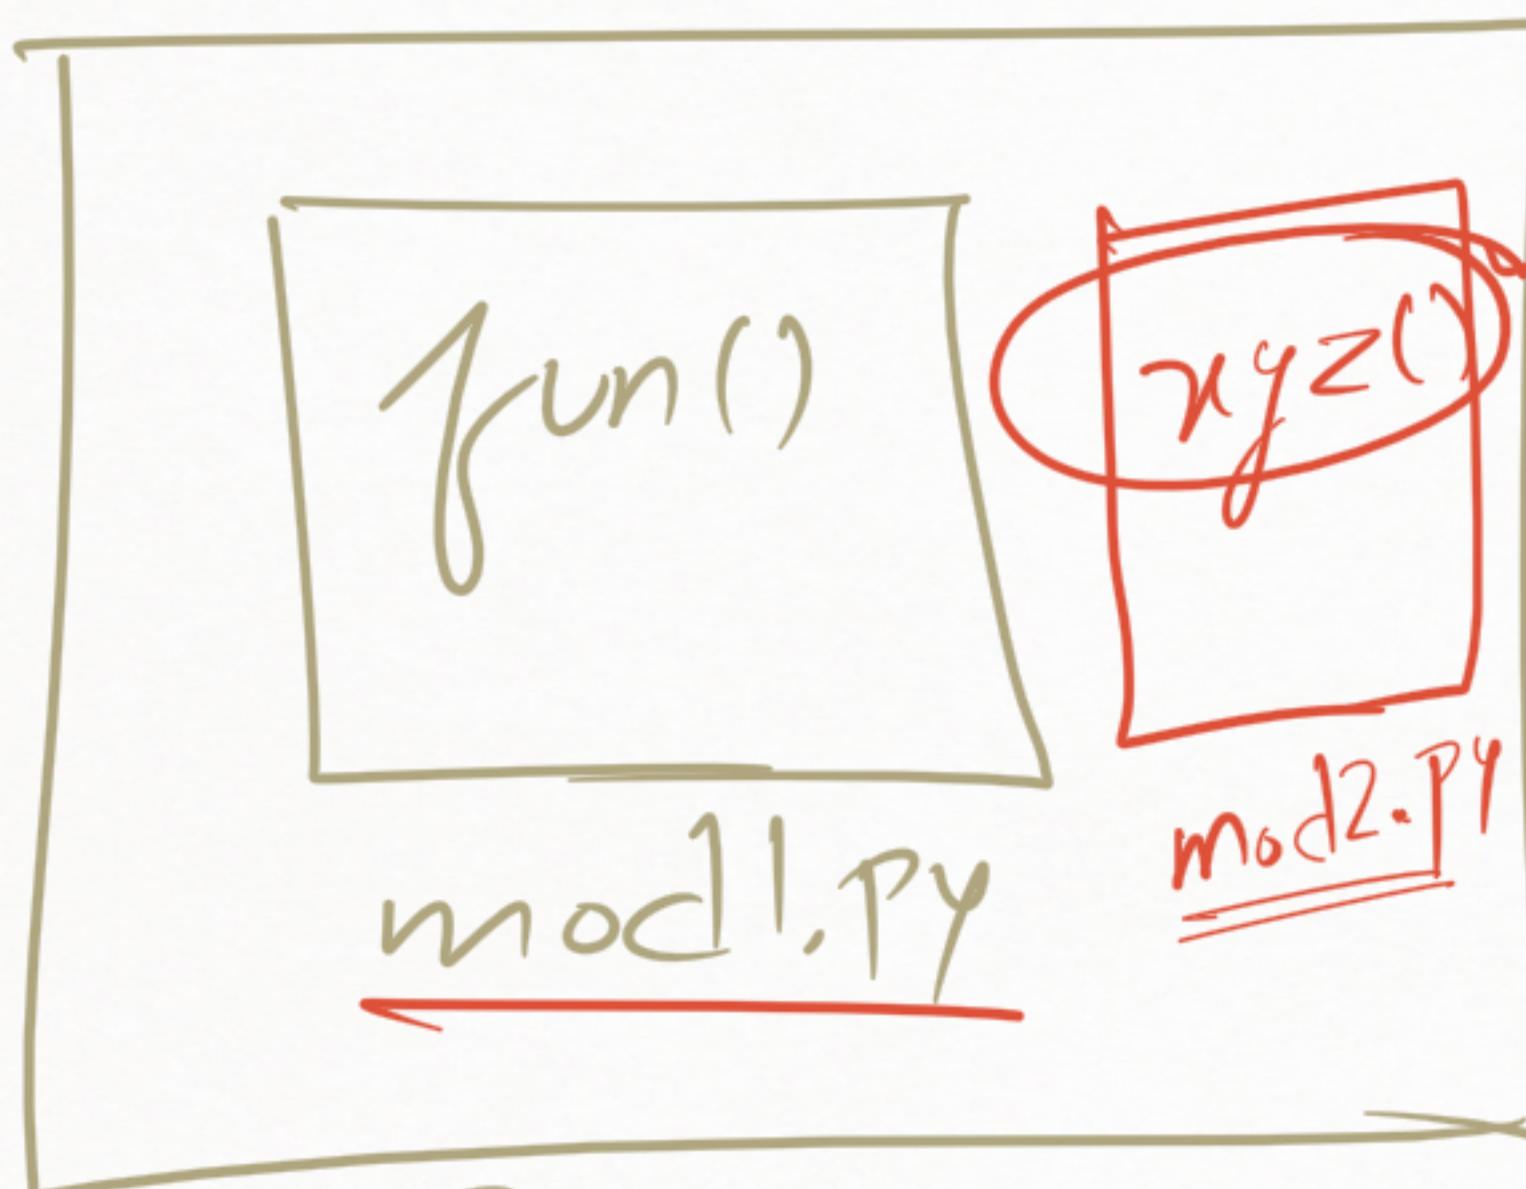

Dot =) to jump into folder

from package.subpackage.subsubpackage
import mod1

Access modules from Package

from package
import mod1

mod1.fun()

Package ✓

APP.PY

=> from package import mod2
mod2.xyz() ✓

from package
import *

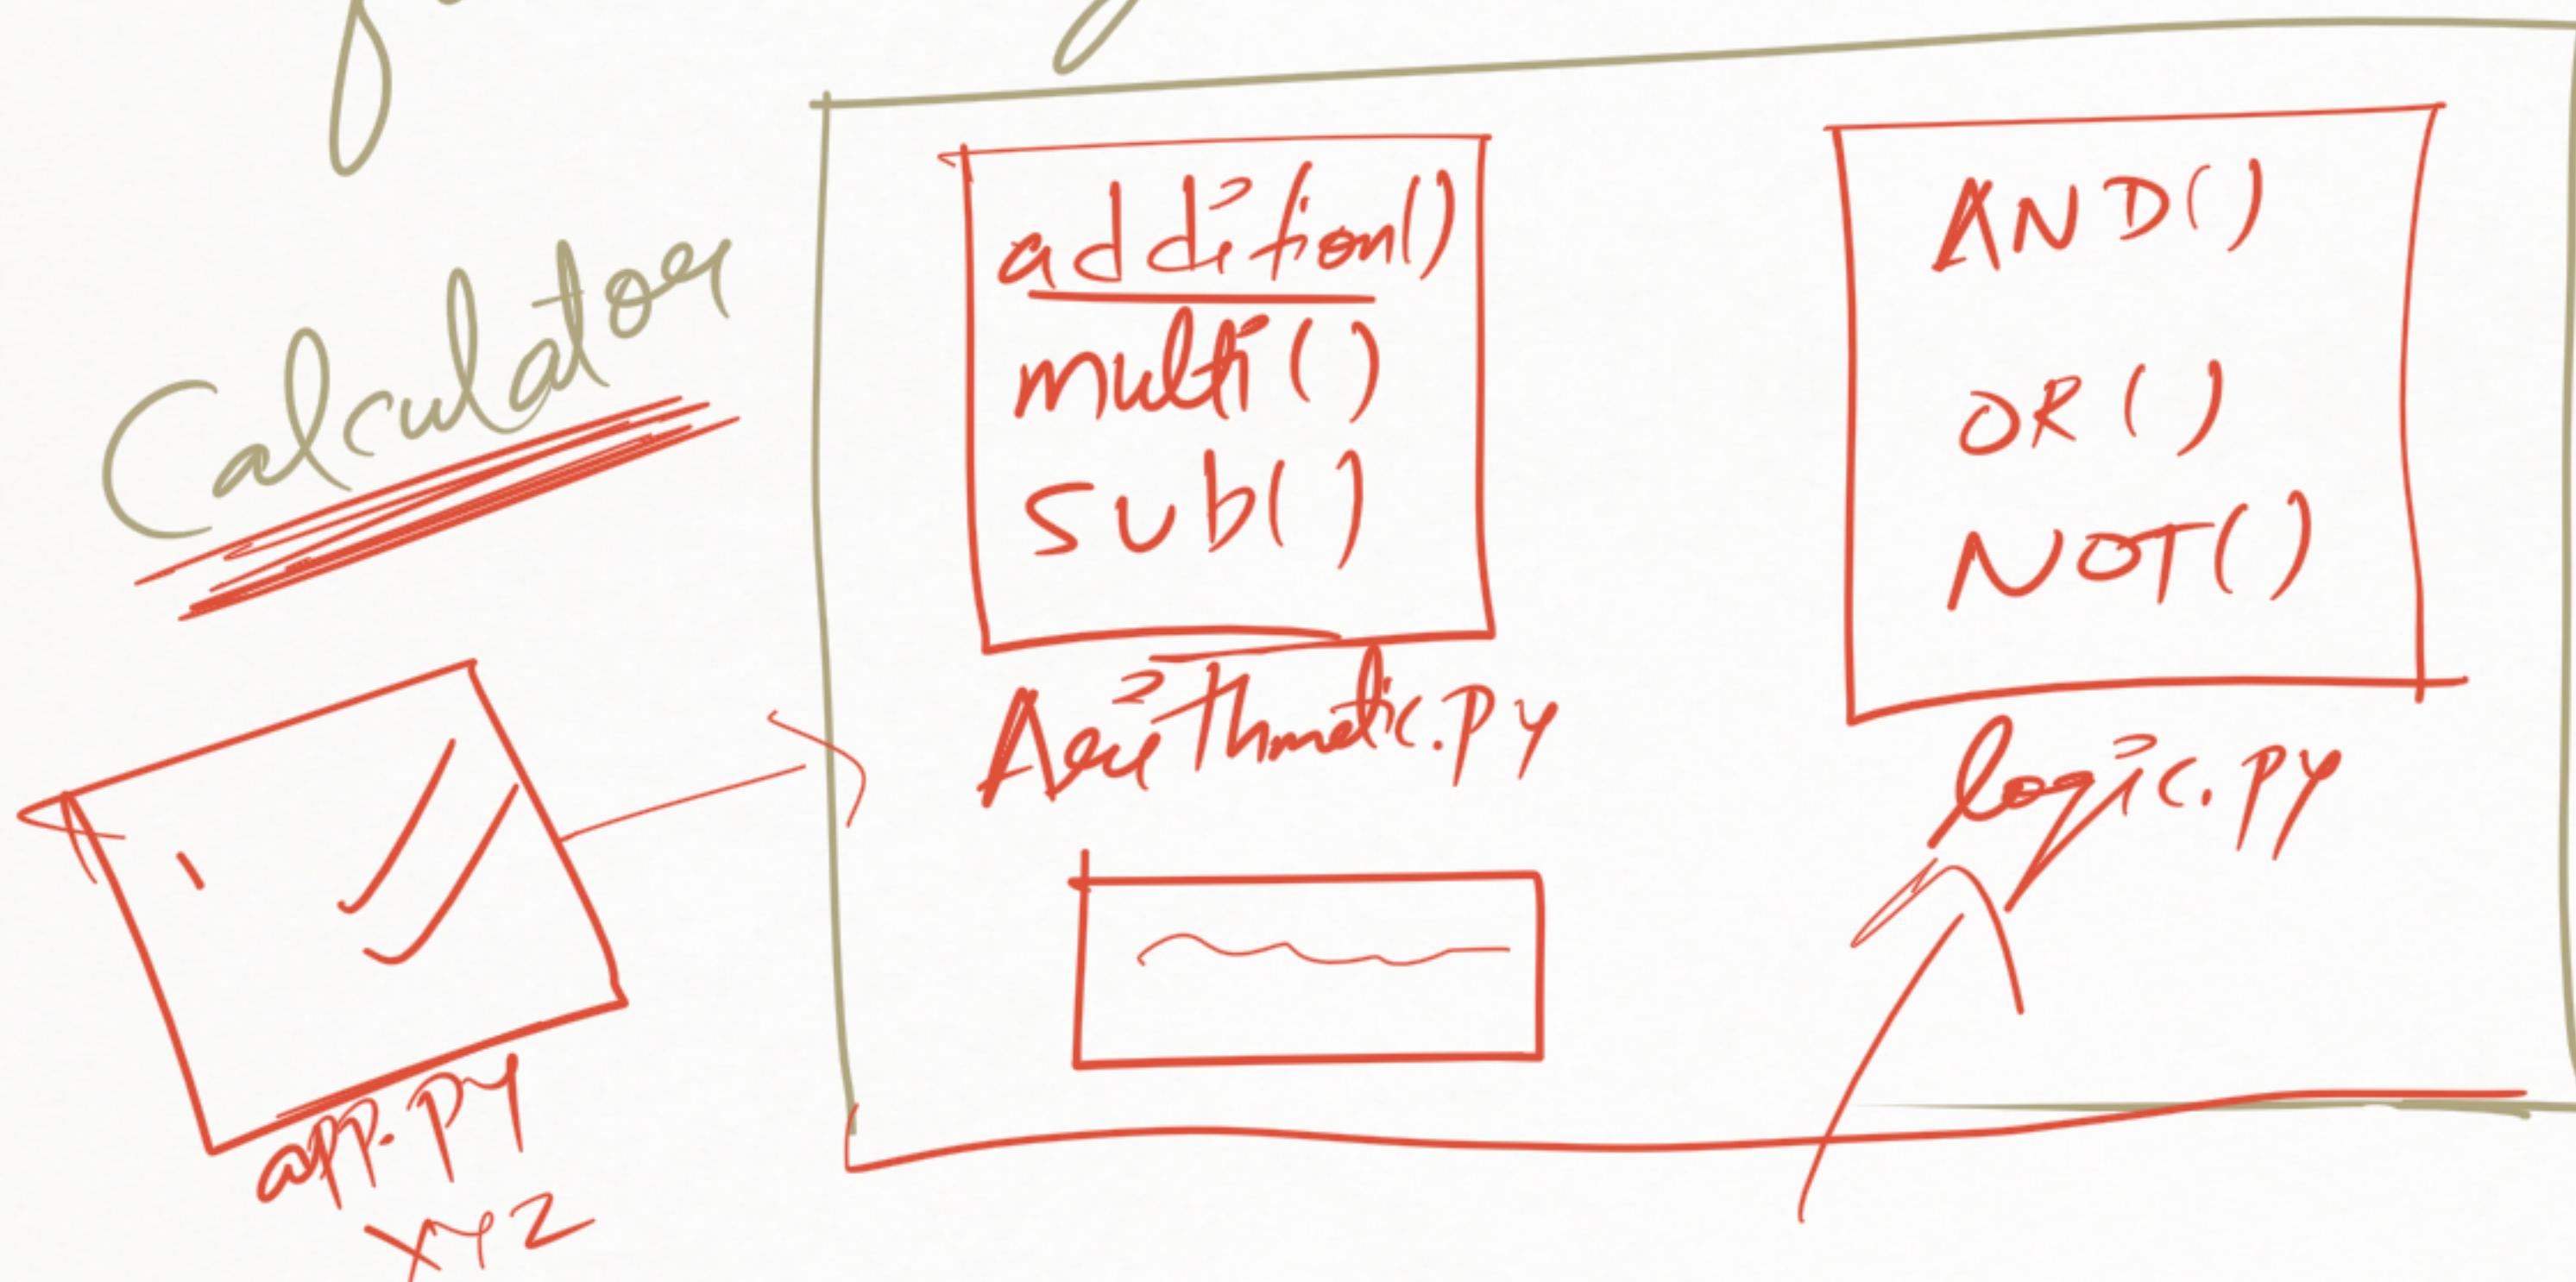

init file

= ['mod2']

works

mod2.xyz()
✓

Question =) Create a Package
which have modules for calculator
functionality

Question Clear?

push it on
github

*Imagination✓

`--init__.py` file
was compulsory earlier

But now you can
make a package without

`--init__.py` file

Python 3.8 ~~Mandatory~~
